

## Teleco wins at the German Innovation Awards 2022

**Teleco is a winner in the Automotive Technologies category of the German Innovation Awards 2022 for its CLIMA e-VAN, one of the smallest roof-mounted air conditioner for campervans on the market. The awards focus on innovation, sustainability and user-experience, and are presented annually by the German Design Council**

*Lugo di Ravenna (June 2022)* – Teleco's CLIMA e-Van was honoured for its adaptability and compactness that makes it one of the most successful air conditioner units on the market.

Especially designed for campervans, Teleco's CLIMA e-Van is the ideal solution for installation on small roofs without having to remove the skylight. It is very quiet, light and easy to install, and can be secured to the roof via the usual 40x40 cm roof-light opening or with a smaller 36x36 cm hole.

Featuring cutting-edge technology, the CLIMA e-Van's design exploits all the latest resources to offer an ecologically clean product. For example, an R32 gas refrigerant has been used as it has the lowest Global Warming Potential (GWP 675) with a 70 percent reduction in environmental pollution power, compared to gases that have been used to date.

The CLIMA e-Van is available in two models with different refrigerating powers, both designed for low energy consumption. It is also equipped with a multi-function blue display and LED lights that can be switched on/off via the remote control.

The German Innovation Awards are an annual event organized by the German Design Council. They have been operating since 1953 as one of the world's leading centres of expertise in communication and knowledge transfer within design, branding and innovation. So the awards have honoured achievements in design, branding and innovation on an international level.

The jury is made up of independent, interdisciplinary experts from technology, digitalisation, science, associations and institutions. The entries are evaluated based on the criteria: level of innovation, user benefits and efficiency.

Design, brand and innovation are also important: this perfect combination is essential to equip companies for the tough competition in the wake of Industry 4.0 and digitalisation, because each of these has an impact on the others.

Vittorio Simioli, co-owner of Teleco Group says: "We are honoured to have received this important award acknowledging the design of one of our flagship products. We take care, not only of the quality and reliability of our products, but also of ergonomics, aerodynamics and innovation details. Since its market launch three years ago, e-VAN has been a market leader in performance and technological innovation."
